

TRADITIONAL INSTRUCTION BENEFITS ALL STUDENTS

COVID-19 OUTBREAK

When the coronavirus first broke out, schools were forced to shut down and go virtual. Traditional ways of teaching had to be adapted to remote learning. Earlier this year, some schools started hybrid learning where students attend school in person about 2-3 times a week.

PIVOT TO ONLINE LEARNING

The transition to online learning was overall pretty smooth with everything that was happening at the time, but there have been concerns about its effects on students' attendance, academic performance, and overall well-being.

WHICH LEARNING IS PREFERRED?

Educators prefer face-to-face learning because it is the most effective and its been trusted for decades. Remote learning still has many flaws and difficulties that need to be figured out. Overall, traditional schooling had proven to be tested the most.

LEARNING ENVIRONMENT

Schools plan on reopening pretty soon for the well-being of their students because conventional learning is more beneficial and preferred. Students need to be in an environment where they can be interactive and be more hands-on because it helps them do better and work faster in school.

FLAWS FOR REOPENING

Social distancing would be a major issue for reopening schools because students would not follow CDC guidelines. It is recommended to stay 6 feet apart but 3 feet has been approved as well. It would still be nearly impossible for students to stay away from each other when interacting.

RESUMING FACE- TO-FACE LEARNING

Schools want to resume to fully In person learning as soon as it is safe and following the CDC's guidelines . If all goes well, they plan for potential reopening of schools this fall for the next academic school year.
